Subject: Possible Site Recommendation for Yucca Mountain

Part of Records Package / Supplement / Correction

Greetings,

The time has come for DOE to endorse Yucca Mountain as the repository site for this nations spent nuclear fuel. I strongly urge all those in authority over the selection and designation of this site to take the necessary actions to endorse the selection of this site to our president. Much money has been spent and conservative scientific studies have been completed which assure Yucca Mountain is a suitable site. Public health and safety are assured through the selection of this site by DOE and the licensing process which will be controlled by the NRC. Designation of Yucca Mountain as our country's nuclear fuel depository is a key element to the success of our national energy policies. Please don't hesitate in affirming the selection of Yucca Mountain, let our country move forward in this long overdue decision process.

Sincerely,

M. K. Graham
